

SUMMER TRAINING PRESENTATION

ON

SWIGGY DATA ANALYSIS DASHBOARD

POWER BI

Centre for Distance and Online Education

**LOVELY PROFESSIONAL UNIVERSITY
PHAGWARA, PUNJAB**

Department of Computer Application

Name-Shubham maurya

Roll No.323201975

Conclusion

ACKNOWLEDGEMENT

PPT

I extend my thanks to the Department of Computer Applications, Lovely Professional University, which gave me the opportunity to work on this project. I also extend my thanks to the Department of Computer

Today, I am feeling a great sense of excitement on my way to successfully complete my project on “Swiggy Data Analysis Using Power Bi Dashboard ” under the guidance of Mr. Sandip Gavit.

I sincerely thank him for his enduring support and faith in my work, and for being with me throughout the process to see to successful project completion.

I would also like to thank Assistant Professor Mr. Asseem Khanna, for his valuable suggestions.

Thank you

Shubham maurya

Date : 23/08/2025

OFFER LETTER

Dear Shubham Maurya,

We are delighted to extend to you an offer for the position of **Data Analytics** at **TechnoHacks Solutions Pvt. Ltd.**. Your Internship will start on **24/08/2025** to **07/10/2025** and will last for **45 Days**.

This role presents a unique opportunity to gain practical experience with live projects and collaborate with seasoned industry professionals.

Acceptance of Offer:

To confirm your acceptance, please **sign this letter and submit it through the onboarding form**.

If you have any questions or require further clarification, please do not hesitate to reach out.

We look forward to welcoming you to **TechnoHacks Solutions Pvt. Ltd.** and to supporting you in your professional growth.

Warm regards,

Sandip Gavit
Founder & CEO
TechnoHacks Solutions Pvt. Ltd.

Acknowledgment and Acceptance

I, **Shubham Maurya**, hereby accept the terms and conditions of this Internship offer.

Signature of Intern: Shubham Maurya

Date: 24/08/2025

CERTIFICATE

This certificate is proudly awarded to

Shubham Maurya

For successfully completing an Internship on

Data Analytics

from **24/08/2025** to **07/10/2025** at **TechnoHacks Solutions Pvt. Ltd.**

During this Internship, we found him/her consistent and hardworking.

We wish all the best in your future endeavors.

Certificate ID : TH11303

A handwritten signature in blue ink, likely of the Founder & CEO, TechnoHacks Solutions.

Chapter-1 Introduction of Project

In today's data-driven business environment, effective decision-making relies heavily on the ability to analyze and visualize complex datasets. This project, titled "Swiggy Data Analysis using Power BI Dashboard," focuses on transforming raw data from Swiggy into meaningful insights through interactive visualizations.

A Swiggy data analysis project using Power BI aims to provide business-driving insights by creating interactive dashboards to visualize key performance indicators. This typically involves analyzing data on sales, customer behavior, and city-wise performance to identify trends like peak order times, popular cuisines, and customer demographics for optimizing business strategy and operational efficiency.

Conclusion

PPT

Object of the Work Undertaken

The primary objective of the work undertaken during the summer training was to gain practical exposure to the core concepts and tools used in the field of data analytics and visualization. The training aimed to build a strong foundation in handling real-world datasets, performing essential data operations, and presenting insights through interactive dashboards.

Scope of the Work

The scope of this summer training project was designed to provide a comprehensive understanding of data analytics workflows, tools, and techniques, with a strong emphasis on practical implementation. The training covered a wide range of activities, beginning with foundational skills in Microsoft Excel, where tasks included data entry, application of basic functions, and chart creation to represent data visually. These initial steps laid the groundwork for understanding how raw data can be structured and interpreted.

Role and Profile of Student

During the summer training, the student worked in the role of a Data Analytics Trainee, focusing on data visualization and business intelligence tasks. The student was responsible for handling raw datasets, performing data cleaning and transformation in Excel, and creating interactive dashboards using Power BI and Tableau. The profile involved analyzing HR, sales, and user data for Swiggy, identifying key performance indicators, and presenting insights through visual reports. The student demonstrated strong analytical thinking, proficiency in BI tools, and a keen understanding of data storytelling for strategic decision-making.

Chapter-2 System requirements

1. Hardware Requirements

- ❖ Processor: Intel Core i3 / i5 / i7 or AMD equivalent
- ❖ RAM (Memory): Minimum 8 GB (Recommended 16 GB for Power BI/Tableau)
- ❖ Hard Disk: At least 256 GB SSD or 500 GB HDD
- ❖ Display: 14-inch or above, resolution 1366×768 or higher
- ❖ Graphics Card: Integrated or Dedicated (for better visualization performance)
- ❖ Internet Connection: Stable broadband connection for data import/export and dashboard publishing
- ❖ Operating System: Windows 10 / 11 (64-bit)

Conclusion

2. Software Requirements

- ❖ Operating System: Windows 10 or higher / macOS
- ❖ Microsoft Excel: Version 2016 or above (for data cleaning and preprocessing)
- ❖ Power BI Desktop: Latest version (for data modeling and dashboard creation)
- ❖ Database Support: Microsoft Access / SQL Database (if used for backend data storage)
- ❖ Web Browser: Google Chrome / Microsoft Edge (for Power BI online publishing)

Chapter-3 Dataset Overview

Data source:

1. The dataset used in this project was collected from Swiggy Food Delivery Data (Sample Dataset) available online for academic and training purposes.
2. It contains detailed information about orders, sales amount, ratings, users, cities, and food categories (Veg, Non-Veg, Others).

Type of Data:

Structured data (Power BI format)

Stored in Excel (.xlsx) and CSV (.csv) format

Data Collection Method:

Data was imported into Microsoft Excel for cleaning and preprocessing.

The cleaned dataset was then connected to Power BI for visualization and dashboard creation.

**Source
of Data:**

Columnans / Fields Used:

Sorted Introduction of Columns and Fields Used: These columns and fields are categorized based on their functional relevance in the dashboard:

Order & Sales Data Columnans:

- Total Orders – Total number of food orders placed
- Total Revenue – Overall revenue generated
- Delivery Charges – Charges collected for delivery services
- Amount by Year – Year-wise revenue trends
- Promotion Spend – Marketing and promotional expenses
- Order Behavior – Monthly or yearly order patterns
- Avg Price – Average price of food items
- Min Price / Max Price – Price range for food categories
- Total Amount – Aggregated transaction value...etc

Chapter-4 Data Cleaning and Preparation

During the development of the Swiggy Data Analysis Dashboard using Power BI, several steps were taken to clean, prepare, and model the data effectively. The following calculated columns, measures, and logic were created using DAX (Data Analysis Expressions) to derive meaningful insights and enable dynamic visualizations.

Data Cleaning and Preparation

- ❖ Removed duplicate entries from Orders, Users, and Restaurant tables.
- ❖ Handled missing values in fields like Rating, Order Value, and User Age.
- ❖ Standardized formats for City, Year, and Type columns.
- ❖ Created relationships between tables: Orders, Users, Restaurant, and Rank_Table.
- ❖ Filtered irrelevant or outlier data to ensure accuracy in analysis.

Calculated Measures and Columns (DAX) :

Avg Rating = AVERAGE(Restaurant[Rating])

Current_Year = MAX(Orders[Year])

Current_YR_Sale = VAR yr = [Current_Year] RETURN CALCULATE([Sale],Orders[Year]=yr)

Calculated Measures and Columns (DAX) :

Avg Rating = AVERAGE(Restaurant[Rating])

Previous_YR_Sale = VAR yr =[Previous_Year] RETURN CALCULATE([Sale],Orders[Year]=yr)

Restaurant Count = DISTINCTCOUNT(Restaurant[Restaurant_id])

Sale = SUM(Orders[Value])

Top N Sales = VAR rankValue = RANKX(ALL(Orders[City]),[Sale],,DESC) VAR selectedRank =
SELECTEDVALUE('Rank Table'[No]) RETURN
IF(selectedRank=0,[Sale],IF(rankValue<=selectedRank,[Sale],BLANK()))

Total city = DISTINCTCOUNT(Orders[City])

Total Quantity Amount = SUM(Orders[Value])

User Count = DISTINCTCOUNT(Orders[User_id])

Orders Count = COUNTROWS(Orders)

Rating count = COUNT(Restaurant[Rating])

Chapter-5 Data Analysis (Power BI Visualization)

Based on the "HOME OVERVIEW" dashboard image, here is a detailed data analysis with each metric introduced one by one in.

First Dashboard Analysis Home:

Based on the "HOME OVERVIEW" dashboard image, here is a detailed data **analysis** with each metric introduced one by one in.

First Dashboard Analysis Home:

KPIs (Key Performance Indicators) are short metrics that help track business performance and user engagement.

In this dashboard:

- Total User (149K) shows the overall number of users.
- Order Count (100K) reflects how many orders were placed.
- Top 10% Customer (725M) highlights the revenue from the most valuable customers.
- Rating Count (61K) indicates how many users gave feedback or ratings.

Based on the "HOME OVERVIEW" dashboard image, here is a detailed data **analysis** with each metric introduced one by one in.

First Dashboard Analysis Home:

- ❖ Veg is the most popular with 123M orders and a moderate average price of ₹182.11.
- ❖ Non-Veg has slightly lower popularity (106M) but the highest average price at ₹231.81, showing premium demand.
- ❖ Others (like burgers) are least popular (24M) and cheapest at ₹50, indicating budget-friendly appeal but lower reach.

This comparison helps understand customer preferences and pricing trends across food types.

Based on the "HOME OVERVIEW" dashboard image, here is a detailed data **analysis** with each metric introduced one by one in.

First Dashboard Analysis Home:

The analysis of the Top 30 City Amount dashboard:

- Tirupati ranks highest with ₹43M, showing top performance.
- Electronic City and Baner, Pune follow with ₹29M and ₹27M, indicating strong urban contribution.
- Mid-range cities like Raipur, Malviya Nagar, and Sultanpur contribute between ₹23M–₹15M.
- Lower-range cities such as Sirsa and Sonipat show ₹10M, indicating potential growth areas.

This dashboard uses a Horizontal Bar Chart, which is ideal for comparing city-wise amounts clearly and ranking them in descending order. It's perfect for visualizing categorical data with long labels like city names.

Based on the "HOME OVERVIEW" dashboard image, here is a detailed data **analysis** with each metric introduced one by one in.

First Dashboard Analysis Home:

This trend shows a strong surge in 2018 followed by gradual decline, possibly due to market changes or external factors

- 2017: ₹89.25M – Starting point, relatively low.
- 2018: ₹402.86M – Sharp rise, peak performance.
- 2019: ₹331.27M – Slight drop but still strong.
- 2020: ₹140.44M – Significant decline.

Based on the "USER OVERVIEW" dashboard image, here is a detailed data analysis with each metric introduced one by one in.

Second Dashboard Analysis User Overview:

Based on the "USER OVERVIEW" dashboard image, here is a detailed data analysis with each metric introduced one by one in.

Second Dashboard Analysis User Overview:

In this dashboard, the selected gender is Female, and the KPIs show:

- User Count (19K): Total number of active female users.
- Current_YR_Sale (₹174M): Revenue from female users in the current year.
- Top10%Customer (₹317M): Sales generated by the top 10% high-value female customers.
- Previous_YR_Sale (₹41M): Last year's revenue from female users.

Together, these KPIs help track user engagement, sales growth, and customer value trends.

Based on the "USER OVERVIEW" dashboard image, here is a detailed data analysis with each metric introduced one by one in.

Second Dashboard Analysis User Overview:

This dashboard uses a Waterfall Chart, which is ideal for showing step-by-step changes in values across categories. It clearly highlights incremental growth and total impact.

- ❑ The chart shows order count increases from age 23 to 30, starting with +11K at age 23.
- ❑ The growth slows gradually: +7K at ages 24–25, then smaller increases like +4K, +3K, down to +1K at age 30.
- ❑ The total order count across all age groups is 43K, indicating cumulative growth without any decline.
- ❑ This helps identify which age groups contribute most to order volume, with younger adults (23–25) being the most active.

Based on the "USER OVERVIEW" dashboard image, here is a detailed data analysis with each metric introduced one by one in.

Second Dashboard Analysis User Overview:

Horizontal Bar Chart for marital status — ideal for comparing two categories side by side.

- ✓ Single users contribute ₹118M, much higher than Married users at ₹51M.
- ✓ Indicates stronger purchasing activity among singles.

Donut Chart for occupation — useful for showing proportional contributions across multiple groups.

- Employees lead with ₹97M (55.76%), followed by Self Employed at ₹51M (29.08%).
- Students contribute ₹17M (10.02%), while Housewives have minimal impact.
- Shows that working professionals are the top spenders.

Based on the "CITY OVERVIEW" dashboard image, here is a detailed data analysis with each metric introduced one by one in.

Third Dashboard Analysis City:

Based on the "CITY OVERVIEW" dashboard image, here is a detailed data analysis with each metric introduced one by one in.

Third Dashboard Analysis City:

In this dashboard:

- ❖ Total City (821) shows the number of cities included in the data.
- ❖ Current_YR_Sale (₹140M) reflects total sales across all cities for the current year.
- ❖ Top10%Customer (₹725M) highlights the contribution of the highest-spending customers.
- ❖ Previous_YR_Sale (₹331M) helps compare last year's performance with the current year.

These KPIs help assess city reach, sales growth, and the impact of top customers.

Based on the "CITY OVERVIEW" dashboard image, here is a detailed data analysis with each metric introduced one by one in.

Third Dashboard Analysis City:

- ❖ This dashboard uses a Horizontal Bar Chart, which is ideal for comparing city-wise sales. It's effective for visualizing ranked data and highlighting top contributors clearly
- ❖ Tirupati leads with ₹41M in sales, making it the top-performing city.
- ❖ Electronic City, Bangalore and Baner, Pune follow closely with ₹27M and ₹26M, showing strong urban sales.
- ❖ Raipur, Malviya Nagar, and Sultanpur contribute moderately, ranging from ₹22M to ₹14M.
- ❖ Vastrapur, Ahmedabad rounds out the list with ₹13M, indicating lower but notable performance.

This ranking helps identify high-revenue cities and areas with growth potential.

Based on the "CITY OVERVIEW" dashboard image, here is a detailed data analysis with each metric introduced one by one in.

Third Dashboard Analysis City:

This helps identify cities with strong user bases and those with potential for outreach.

- Bikaner leads with 1.6K users, showing the highest engagement.
- Noida-1 follows with 1.4K, and Indirapuram with 1.2K.
- Cities like BTM, Bangalore, Rohini, Delhi, Kothrud, Pune, and Indiranagar, Bangalore range between 1.1K–1.0K, indicating moderate user presence.

Based on the "CITY OVERVIEW" dashboard image, here is a detailed data analysis with each metric introduced one by one in.

Third Dashboard Analysis City:

This helps identify where users are most active in giving feedback.

- ✓ - Bikaner leads with 850 ratings, showing the highest user feedback.
- ✓ - Indiranagar and Noida-1 follow with 601 and 545 ratings, indicating strong engagement.
- ✓ - Cities like Koramangala, HSR, BTM, and Greater Kailash range between 483–414 ratings, showing moderate activity.

Based on the "CITY OVERVIEW" dashboard image, here is a detailed data analysis with each metric introduced one by one in.

Fourth Dashboard Analysis Restaurant :

Based on the "RESTAURANT OVERVIEW" dashboard image, here is a detailed data analysis with each metric introduced one by one in.

Fourth Dashboard Analysis Restaurant :

In this restaurant dashboard:

- ❖ Restaurant Count (148K) shows the total number of restaurants included in the analysis.
- ❖ Avg Rating (4) reflects the average customer rating across all restaurants, indicating overall satisfaction.
- ❖ Top10%Customer (₹725M) highlights the revenue generated by the top 10% of high-value customers.
- ❖ Previous_YR_Sale (₹331M) shows last year's total sales, useful for comparing growth or decline.

These KPIs help assess restaurant reach, customer quality, and year-over-year performance.

Based on the "RESTAURANT OVERVIEW" dashboard image, here is a detailed data analysis with each metric introduced one by one in.

Fourth Dashboard Analysis Restaurant :

This dashboard uses a Vertical Bar Chart, which is ideal for comparing quantities across categories like cities. It clearly shows rankings and differences in restaurant count

- ❑ Bikaner leads with 1.7K restaurants, showing the highest concentration.
- ❑ Noida-1 and Indirapuram follow with 1.4K and 1.3K, indicating strong food service presence.
- ❑ BTM, Bangalore and Rohini, Delhi have .2K and 1.1K, showing moderate restaurant density.

This helps identify cities with the most restaurant activity, useful for planning and market targeting.

Based on the "RESTAURANT OVERVIEW" dashboard image, here is a detailed data analysis with each metric introduced one by one in.

Fourth Dashboard Analysis Restaurant :

This dashboard uses a Pie Chart, which is ideal for showing proportional distribution across categories. It visually highlights which cuisines are most common among restaurants.

- North Indian and Indian-Continental cuisines are the most popular, each offered by 6K restaurants (around 24% each).
- Chinese and Indian cuisines follow with 5K restaurants each, contributing roughly 18–19%.
- Another North Indian entry shows 4K restaurants (about 16%), possibly a data duplication or subcategory.

This breakdown helps identify dominant food preferences and restaurant offerings

Based on the "RESTAURANT OVERVIEW" dashboard image, here is a detailed data analysis with each metric introduced one by one in.

Fourth Dashboard Analysis Restaurant :

This dashboard uses a Donut Chart, which is ideal for showing proportional distribution while keeping the center open for additional data or labels. It's visually engaging and effective for comparing brand shares

- ❖ Domino's leads with 409 responses (27.32%), showing highest customer preference.
- ❖ Pizza Hut and KFC follow with 318 (21.24%) and 306 (20.44%) respectively, indicating strong brand engagement.
- ❖ Kwaliti and Baskin Robbins have 236 (15.77%) and 228 (15.23%), showing moderate popularity.

This breakdown helps understand brand preference and market share among top restaurant chains.

Chapter-6 Dashboard Overview

This dashboard collection provides a multi-dimensional view of user behavior, sales performance, restaurant activity, and city-level engagement:

- ❑ **User & Sales Insights:** Female users contributed ₹174M in current year sales, with top 10% customers generating ₹317M. Previous year sales were ₹41M, showing growth trends.
- ❑ **City Performance:** Tirupati, Electronic City, and Baner, Pune lead in both user count and sales, with Tirupati topping at ₹43M. Bikaner shows high engagement in ratings and restaurant presence.
- ❑ **Restaurant Metrics:** Across 148K restaurants, average rating is 4. Top 10% customers contributed ₹725M, while previous year sales were ₹331M. Bikaner leads in restaurant count with 1.7K.

Conclusion

- ❑ **Cuisine & Brand Preferences:** North Indian and Indian-Continental cuisines dominate restaurant offerings. Domino's, Pizza Hut, and KFC are the most preferred brands, with Domino's leading at 27.32%.
- ❑ **Demographic Trends:** Single users and employees drive the highest sales. Age-wise order count peaks at 23–25 years, contributing significantly to total volume.

Visualization Types Used:

- Horizontal & Vertical Bar Charts for city, user, and restaurant comparisons
- Line Chart for year-wise sales trends
- Waterfall Chart for age-based order growth
- Pie & Donut Charts for cuisine and brand distribution

**WPS
OFFICE**

Chapter-7 Insights and Findings

Sales Trends:

- ❖ Tirupati leads in city-wise sales with ₹43M.
- ❖ Single users and employees contribute the highest revenue.
- ❖ Top 10% customers generate significantly more sales than average users

User Behavior:

- ❑ Highest user count observed in Bikaner (1.6K).
- ❑ Age group 23–25 shows peak order activity.
- ❑ Female users show strong engagement and sales contribution.

Restaurant Performance:

- Total restaurants analyzed: 148K.
- Bikaner has the highest restaurant count (1.7K).
- Average restaurant rating is 4.

Cuisine & Brand Preferences:

- Cuisine & Brand Preferences:
- North Indian and Indian-Continental cuisines dominate offerings.
- Domino's is the most preferred brand (27.32%), followed by Pizza Hut and KFC.

City-Level Engagement:

- ✓ Bikaner ranks high in ratings, user count, and restaurant presence.
- ✓ Cities like Noida-1 and Indirapuram show consistent performance across multiple metrics.

Chapter-8 Conclusion

The Power BI dashboard provides a comprehensive and data-driven overview of Swiggy's operational and customer dynamics. Key findings reveal that cities like Tirupati and Bikaner lead in both sales and user engagement, while single users and employees drive the highest revenue. Restaurant performance is strong across 148K outlets, with North Indian and Indian-Continental cuisines dominating offerings. Brand preferences favor Domino's, Pizza Hut, and KFC, reflecting consumer loyalty. Age-wise order trends peak at 23–25 years, and top 10% customers contribute disproportionately to overall sales. These insights enable strategic decision-making for marketing, expansion, and customer targeting.
